

# SIDDARTHA INSTITUTE OF SCIENCE AND TECHNOLOGY

(AUTONOMOUS)

**M.Tech. (Electronics & Communication Engineering)**

**Specialization: Digital Electronics & Communication Systems**

## I M.Tech - I Sem

S.No	Course Code	Course Name	L	T	P	Credits
1	20HS0823	Research Methodology and IPR	2	-	-	2
2	20EC4001	Advanced Digital System Design	3	-	-	3
3	20EC4002	Advanced Digital Signal Processing	3	-	-	3
Programme Elective - I						
4	20EC4003	Antenna and Radiating Systems	3	-	-	3
	20EC4004	Digital Communication Techniques				
	20EC4005	DSP Processors & Architectures				
Programme Elective - II						
5	20EC4006	High Speed Networks	3	-	-	3
	20EC4007	Voice and Data Networks				
	20EC4008	Wireless Sensor Networks				
6	20EC4009	Advanced Digital Signal Processing Lab(Virtual Lab)	-	-	4	2
7	20EC4010	Advanced Digital System Design Lab	-	-	4	2
Audit Course - I						
8	20HS0818	English for Research Paper Writing	2	-	-	-
Contact Periods / Week			16	-	8	18
			Total/Week: 24			

## I M.Tech - II Sem

S.No	Course Code	Course Name	L	T	P	Credits
1	20EC4011	Wireless Communications	3	-	-	3
2	20EC4012	Coding Theory & Techniques	3	-	-	3
Programme Elective - III						
3	20EC4109	Introduction to IoT	3	-	-	3
	20EC4013	Adaptive Signal Processing				
	20EC4014	Cognitive Radio				
Programme Elective - IV						
4	20EC4015	Image & Video Processing	3	-	-	3
	20EC4016	Pattern Recognition and Machine learning				
	20EC4017	Detection & Estimation of Signals				
5	20EC4018	Advanced Communications Lab (Virtual Lab)	-	-	4	2
6	20EC4019	Image & Video Processing Lab	-	-	4	2
7	20EC4020	Mini Project	-	-	4	2
Audit Course - II						
8	20HS0829	Constitution of India	2	-	-	-
Contact Periods / Week			14	-	12	18
			Total/Week:26

1	20EC4024	Dissertation –II	-	-	32	16
Contact periods / Week			Total/Week:32			16

**NOTE:** L- Lecture, T- Theory, P-Practical

**LIST OF SUBJECTS**

S.No	Course Code	Course Name
1.	20EC4001	Advanced Digital System Design
2.	20EC4002	Advanced Digital Signal Processing
3.	20EC4003	Antenna and Radiating Systems
4.	20EC4004	Digital Communication Techniques
5.	20EC4005	DSP Processors & Architectures
6.	20EC4006	High Speed Networks
7.	20EC4007	Voice and Data Networks
8.	20EC4008	Wireless Sensor Networks
9.	20EC4009	Advanced Digital Signal Processing Lab (Virtual Lab)
10.	20EC4010	Advanced Digital System Design Lab
11.	20HS0823	Research Methodology and IPR
12.	20HS0818	English for Research Paper Writing
13.	20CE1029	Disaster Management
14.	20HS0825	Sanskrit for Technical Knowledge
15.	20HS0826	Value Education
16.	20EC4011	Wireless Communications
17.	20EC4012	Coding Theory & Techniques
18.	20EC4109	Introduction to IoT
19.	20EC4013	Adaptive Signal Processing
20.	20EC4014	Cognitive Radio
21.	20EC4015	Image & Video Processing
22.	20EC4016	Pattern Recognition and Machine learning
23.	20EC4017	Detection & Estimation of Signals
24.	20EC4018	Advanced Communications Lab (Virtual Lab)
25.	20EC4019	Image & Video Processing Lab
26.	20EC4020	Mini Project
27.	20HS0829	Constitution of India
28.	20HS0827	Pedagogy Studies
29.	20HS0828	Stress Management by Yoga
30.	20HS0819	Personality Development through Life Enlightenment Skills.
31.	20EC4021	Optical Networks
32.	20EC4213	Testing & Testability
33.	20EC4022	RF and Microwave Circuit Design
34.	20HS0824	Business Analytics
35.	20CE1028	Cost Management of Engineering Projects
36.	20EE2128	Waste to Energy
37.	20ME3026	Industrial Safety
38.	20ME3027	Advances in Operations Research
39.	20ME3028	Composite Materials
40.	20EC4023	Dissertation-I
41.	20EC4024	Dissertation –II

**SIDDARTHA INSTITUTE OF SCIENCE AND TECHNOLOGY :: PUTTUR  
(AUTONOMOUS)**

**I M. Tech. – I Sem.**

**L T P C**

**2 - - 2**

**(20HS0823) RESEARCH METHODOLOGY AND IPR**

**COURSE OBJECTIVES**

The objectives of this course:

1. *Understand some basic concepts of research and its methodologies.*
2. *Identify and discuss appropriate research topics, select appropriate research design, and implement a research project.*
3. *Understand the intricacies of grant of patent, patentability, licensing and revocation at national and international level.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Explain the key concepts and issues in research and basic framework of research process.*
2. *Formulate appropriate research problem and implement suitable research design for the research problem.*
3. *Identify various sources of information for literature review and data collection.*
4. *Develop an understanding of ethics in conducting applied research and make use of components of scholarly writing in report preparation.*
5. *Identify different types of Intellectual Properties (IPs), the right of ownership, scope of protection as well as the ways to create and to extract value from IP.*
6. *Recognize the crucial role of IP in organizations of different industrial sectors for the purposes of product and technology development.*

**UNIT- I**

**Research Methodology:** Meaning, Objective and importance of research - Types of research - steps involved in research -Motivation in Research, Types of Research - Significance of Research - Research Methods versus Methodology - Importance of Knowing How Research is done - Research Process - Criteria of Good Research defining research problem - Errors in selecting a research problem

**UNIT- II**

**Research Design and Data Collection:** Research design - Different Research Designs - Effective literature studies -Classification of Data - Methods of Data Collection – Sampling - Sampling techniques, procedure and methods - Ethical considerations in research - Responsibility of ethics in research

**UNIT- III**

**Research Report Writing:** Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

**UNIT-IV**

**Nature of Intellectual Property:** Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT

**UNIT- V**

**Patent Rights:** Scope of Patent Rights - Licensing and transfer of technology - Patent information and databases - Geographical Indications - New Developments in IPR: Administration of Patent System - New developments in IPR: IPR of Biological Systems, Computer Software etc - Traditional knowledge - Case Studies - IPR and IITs

**TEXT BOOKS**

1. Stuart Melville and Wayne Goddard, *Research methodology: an introduction for science& engineering students*
2. Wayne Goddard and Stuart Melville, *Research Methodology: An Introduction.*

(AUTONOMOUS)**

**I M. Tech. – I Sem.**

**L T P C**

**3 - - 3**

**(20EC4001) ADVANCED DIGITAL SYSTEM DESIGN**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To introduce methods to analyze and design synchronous and asynchronous sequential circuits.*
2. *To introduce the architectures of programmable devices.*
3. *To test the performance of digital circuits by various algorithms.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Gain knowledge on digital integrated circuit hardware design.*
2. *Describe Fault Diagnosis in Sequential Circuits*
3. *Identify the requirements and specifications of the system required for a given test generation.*
4. *Test the performance of combinational and sequential digital circuits using algorithms.*
5. *Able to analyze the performance of the Asynchronous sequential Machine.*
6. *Illustrate Various Fault Models and generate Test Vectors by various Test Generation Method*

**UNIT – I**

**Design of Digital Systems:** ASM Charts –Hardware Description Language And Control Sequence Method – Reduction of State Tables, State Assignments.

**Sequential Circuit Design:** Design of Iterative Circuits – Design of Sequential Circuits Using Roms, PLAs, CPLD And Fpgas.

**UNIT – II**

**Fault Modeling:** Fault classes and models – Stuck at faults, bridging faults, Transition and Intermittent faults.

**Test Generation:** Fault diagnosis of Combinational circuits by conventional methods – Path Sensitization technique, Boolean difference method, Kohavi algorithm.

**UNIT – III**

**Test Pattern Generation:** D – Algorithm, PODEM, Random testing, Transition count testing, Signature Analysis and Testing for bridging faults.

**UNIT – IV**

**Programming Logic Arrays:** Introduction – Design using PLA's, PLA minimization and PLA folding.

**Fault Diagnosis in Sequential Circuits:** State identification and Fault detection experiment  
- Machine identification, Design of fault detection experiment.

#### UNIT – V

**PLA Testing:** Fault models – Test generation and Testable PLA design.

**Asynchronous Sequential Machine:** Fundamental mode model – Flow table, State reduction, Minimal closed covers, Races, Cycles and Hazards.

(AUTONOMOUS)**

**I M. Tech. – I Sem.**

**L T P C**

**3 - - 3**

**(20EC4002) ADVANCED DIGITAL SIGNAL PROCESSING**

**COURSE OBJECTIVES**

The objectives of this course:

1. *Comprehend mathematical description and modeling of discrete time random signals.*
2. *Familiar with important theorems and algorithms of Digital Signal Processing.*
3. *Understand the concepts of estimation, prediction and filtering concepts and techniques.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Analysediscrete – time signals*
2. *Understand the digital Signal Processing algorithms and its applications*
3. *Apply the knowledge of usage of Digital systems in real time applications*
4. *Apply the algorithms for recent trend applications in Digital Signal Processing*
5. *Understand the modern filter design and their implementation*
6. *Able to understand the parametric method for estimation of power spectral density*

**UNIT – I**

**Overview:** Discrete-Time Signals, Sequences and Sequence Representation – Discrete-Time Systems– Time-Domain Characterization and Classification of LTI Discrete-Time Systems– The Continuous-Time Fourier Transform– The Discrete-Time Fourier Transform– Energy Density Spectrum of a Discrete-Time Sequence– Band-Limited Discrete-Time signals– The Frequency Response of LTI Discrete-Time System.

**LTI Systems:** Types of Linear-Phase Transfer Functions– Simple Digital Filters– Complementary Transfer Function– Inverse Systems– System Identification– Digital Two-Pairs– and Algebraic Stability Test.

**UNIT – II**

**Digital Filter Structure and Design:** All Pass Filters – Tunable IIR Digital Filter, IIR Tapped Cascade Lattice Structures – FIR Cascaded Lattice Structures – Parallel All Pass Realization of IIR Transfer Functions – State Space Structures – Polyphase Structures – Digital Sine-Cosine Generator – Computational Complexity of Digital Filter Structures – Design of IIR Filter using pade approximation – Least Square Design Methods – Design of Computationally Efficient FIRFilters.

**UNIT – III**

**FFT Algorithms:** Fast DFT Algorithms Based on Index Mapping – Sliding Discrete Fourier Transform – DFT Computation Over a Narrow Frequency Band – Split Radix FFT

– Linear Filtering Approach to Computation of DFT using Chirp Z-Transform.

**Multi Rate Signal Processing:** Decimation by a Factor D – Interpolation by a Factor I – Sampling Rate Conversion by a Rational Factor I/D – Filter Design & Implementation for Sampling Rate Conversion.

#### UNIT – IV

**Power Spectral Estimation:** Estimation of Spectra from Finite Duration Observation of Signals – Non-Parametric Methods: Bartlett, Welch & Blackman & Tukey methods.

**Parametric Methods for Power Spectrum Estimation:** Relation Between auto Correlation & Model Parameters– Yule-Walker & Burg Methods – MA & ARMA Models for Power Spectrum Estimation.

#### UNIT – V

**Analysis of Finite Word length Effects in Fixed-Point DSP Systems:** Fixed, Floating Point Arithmetic – ADC Quantization Noise & Signal Quality-Finite Word Length Effect in IIR Digital Filters – Finite Word-Length Effects in FFT Algorithms.

**Applications of Digital Signal Processing:** Dual Tone Multi-Frequency Signal Detection, Spectral Analysis of Sinusoidal Signals, Spectral Analysis of Non-stationary Signals, Musical Sound Processing, Over Sampling A/D Converter, Over Sampling D/A Converter, Discrete-Time Analytic Signal Generation.

#### TEXT BOOKS

1. Sanjit K Mitra, *Digital Signal Processing*, Tata McGraw Hill Publications.

(AUTONOMOUS)**

**I M. Tech. – I Sem.**

**L T P C**

**3 - - 3**

**( 20EC4003) ANTENNA and RADIATING SYSTEMS  
(Programme Elective –I)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To learn the Fundamentals of electromagnetic: radiation, wave equation, retarded potential, short current element, near and far fields, Poynting's theorem.*
2. *To Design of antenna arrays: principle of pattern multiplication.*
3. *To understand broadside and end fire arrays, array synthesis, coupling effects and mutual impedance, parasitic elements.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Understand the basic principles of all types of antennas calculate the far field region.*
2. *Analyze different types of antennas their parametric integral expressions for a given current source for various frequency ranges.*
3. *Calculate electromagnetic fields for a given vector potential can understanding practical antennas.*
4. *Implement pattern multiplication principle for some practical array antennas such as dipole and horn antenna.*
5. *Apply the radiation patterns of antennas through measurement setups.*
6. *Design Wire Antennas, Loop Antennas, Reflector Antennas, Lens Antennas, Horn Antennas and Micro Strip Antennas*

**UNIT-I**

**Antenna Fundamentals:** Types of Antennas, Wire Antennas, Aperture Antennas, Micro Strip Antennas, Array Antennas Reflector Antennas, Lens Antennas–Radiation Mechanism, Current Distribution on Thin Wire Antenna–Fundamental Parameters of Antennas, Radiation Pattern, Radiation Power Density, Radiation Intensity, Directivity, Gain, Antenna Efficiency, Beam Efficiency, Bandwidth, Polarization, Input Impedance, Radiation Efficiency, Antenna Vector Effective Length, Friis Transmission Equation, Antenna Temperature.

**UNIT- II**

**Linear Wire And Loop Antennas:** Linear Wire Antennas, Infinitesimal Dipole, Small Dipole, Region Separation, Finite Length Dipole, Half Wave Dipole, Ground Effects–Loop Antennas, Small Circular Loop, Circular Loop of Constant Current, Circular Loop With Non-Uniform Current.

**UNIT– III**

**Linear Arrays:** Two Element Array, N- Element Array, Uniform Amplitude and Spacing, Broadside and End Fire Array, Super Directivity, Planar Array, Design Consideration.

**UNIT– IV**

**Aperture Antennas and Horn Antennas:** Aperture Antennas, Huygen's Field Equivalence Principle, Radiation Equations, Rectangular Aperture, Circular Aperture– Horn Antennas, E-Plane & H-Plane Sectoral Horns, Pyramidal Horns, Conical Horns.

**UNIT –V**

**Microstrip Antennas And Reflector Antennas:** Micro Strip Antennas, Basic Characteristics, Feeding Mechanisms, Method of Analysis, Rectangular Patch, Circular Patch–Reflector Antennas, Plane Reflector, Parabolic Reflector, Cassegrain Reflectors–Introduction to MIMO.

**TEXTBOOKS**

SIDDHARTH  
INSTITUTIONS  
PUTTUR

ESTD:2001

**SIDDARTHA INSTITUTE OF SCIENCE AND TECHNOLOGY :: PUTTUR  
(AUTONOMOUS)**

**I M. Tech. – I Sem.**

**L T P C**

**3 - - 3**

**(20EC4004) DIGITAL COMMUNICATION TECHNIQUES  
(Programme Elective –I)**

**COURSE OBJECTIVES**

The objectives of this course:

1. To understand the building blocks of digital communication system.
2. To prepare mathematical background for communication signal analysis.
3. To understand and analyze the signal flow in a digital communication system.
4. To analyze error performance of a digital communication system in presence of noise and other interferences.

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. Define and specify random processes and determine whether a given process is stationary, wide sense stationary or ergodic and determine the response of a linear time invariant (LTI) system to such a random process.
2. Apply the knowledge of linear algebra topics like vector space, basis, dimension, inner product, norm and orthogonal basis to signals.
3. Analyse the performance of digital modulation schemes over AWGN channels and choose appropriate modulation schemes according to design criteria.
4. Analyze the pass band communication and modulation techniques to understand the small scale fading models.
5. Analyze different types of optimum receivers and evaluate the performance of digital modulation schemes over wireless channels.
6. Design and develop the different types of modulation techniques, equalizer to improve the performance under ISI for various applications

**UNIT – I**

**Review of Random Variables and Processes:** Random Variable – Moment Generating Function – Markov's Inequality – Chebyshev's Inequality – Central Limit Theorem– Chi-Square, Rayleigh, and Ricean Distributions – Correlation – Covariance Matrix Stationary Processes – Wide Sense Stationary Processes – Ergodic Process – Cross Correlation – Autocorrelation Functions – Gaussian Process.

**Characterization of Communication Signals and Systems:** Signal Space Representations- Vector Space Concepts, Signal Space Concepts, Orthogonal Expansion of Signals. Representation of Digitally Modulated Signals-Memory Less Modulation Methods.

**UNIT – II**

**Communication Over Additive Gaussian Noise Channels:** Optimum Receiver for Signals Corrupted by Additive White Gaussian Noise (AWGN)- Cross Correlation

Demodulation, Matched Filter Demodulator and Error Probabilities, Optimum Receiver for Signals with Random Phase in AWGN Channels, Optimum Receiver for Binary Signals, Optimum Receiver for M-Array Orthogonal Signals, Probability of Error for Envelope Detection of M-Array Orthogonal Signals. Optimum Waveform Receiver for Colored Gaussian Noise Channels, Karhunen-Loeve Expansion Approach, and Whitening.

### UNIT – III

**Fading Channels:** Characterization of Fading Multipath Channels, Statistical Models for Fading Channels, Time Varying Channel Impulse Response, Narrow and Wide Band Fading Models, Channel Correlation Functions, Key Multipath Parameters, Rayleigh And Ricean Fading Channels, Simulation Methodology of Fading Channels.

### UNIT – IV

**Digital Communication Over Fading Channels:** Optimum Coherent and Non-Coherent Receiver in Random Amplitude, Random Phase Channels- Performance of Rayleigh and Ricean Channels, Performance of Digital Modulation Schemes Such as BPSK, QPSK, FSK, DPSK, MSK etc. Over Wireless Channels.

### UNIT – V

**Communication Over Band Limited Channels:** Communication over Band Limited Channels- Optimum Pulse Shaping- Nyquist Criterion for Zero ISI, Partial Response Signaling- Equalization Techniques, Zero Forcing Linear Equalization- Decision Feedback Equalization.

**Orthogonal Frequency Division Multiplexing (OFDM):** Carrier Synchronization, Timing Synchronization, Multichannel and Multicarrier Systems.

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>

**(20EC4005) DSP PROCESSORS & ARCHITECTURES  
(Programme Elective –I)**

**COURSE OBJECTIVES**

The objectives of this course:

1. To recall digital transform techniques.
2. To introduce architectural features of programmable DSP Processors of TI and Analog Devices.
3. To give practical examples of DSP Processor architectures for better understanding.
4. To develop the programming knowledge using Instruction set of DSP Processors.
5. To understand interfacing techniques to memory and I/O devices.

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. Analyze the concept of Digital Signal Processing and transforms.
2. Apply DFT for the analysis of digital signals processing.
3. Understand DSP architecture and programming
4. Get an in-depth knowledge of TMS320C54XX processors.
5. Implement different forms of FIR and IIR filters
6. Know about the programming language techniques and interfacing of memory and I/O peripherals to the DSP processors.

**UNIT – I**

**Introduction to Digital Signal Processing:** Introduction, A Digital Signal-Processing System, the Sampling Process, Discrete Time Sequences – Discrete Fourier Transform (DFT)– Fast Fourier Transform (FFT)– Linear Time-Invariant Systems – Digital Filters – Decimation and Interpolation – Analysis and Design tool for DSP Systems MATLAB, DSP Using MATLAB.

**Computational Accuracy in DSP Implementations:** Number Formats for Signals and Coefficients in DSP Systems – Dynamic Range and Precision – Sources of Error in DSP Implementations, A/D Conversion Errors, DSP Computational Errors, D/A Conversion Errors, Compensating Filter.

**UNIT – II**

**Architectures for Programmable DSP Devices:** Basic Architectural Features, DSP Computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability and Program Execution, Speed Issues, Features for External Interfacing.

**Execution Control and Pipelining:** Hardware Looping, Interrupts, Stacks, Relative Branch Support Pipelining and Performance, Pipeline Depth, Interlocking, Branching Effects, Interrupt Effects, Pipeline Programming Models.

### UNIT – III

**Programmable Digital Signal Processors:** Commercial Digital Signal Processing Devices, Data Addressing Modes of TMS320C54XX DSPs, Data Addressing Modes of TMS320C54XX Processors, Memory Space of TMS320C54XX Processors, Program Control, TMS320C54XX Instructions and Programming, On-Chip Peripherals, Interrupts of TMS320C54XX Processors, Pipeline Operation of TMS320C54XX Processors.

### UNIT – IV

**Implementation of Basic DSP Algorithms:** The Q-notation, FIR Filters, IIR Filters, Interpolation Filters, Decimation Filters, PID Controller, Adaptive Filters, 2-D Signal Processing.

**Implementation of FFT Algorithms:** An FFT Algorithm for DFT Computation, A Butterfly Computation, Overflow and Scaling, Bit-Reversed Index Generation, An 8-Point FFT Implementation on the TMS320C54XX, Computation of the Signal Spectrum.

### UNIT – V

**Interfacing Memory and I/O Peripherals to Programmable DSP Devices:** Memory Space Organization, External Bus Interfacing Signals, Memory Interface – Parallel I/O Interface, Programmed I/O, Interrupts and I/O, Direct Memory Access (DMA). A Multichannel Buffered Serial Port (McBSP), McBSP Programming, a CODEC Interface Circuit, CODEC Programming, A CODEC-DSP Interface Example.

**3 - - 3**

**(20EC4006) HIGH SPEED NETWORKS  
(Programme Elective –II)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To learn High speed networks, Traffic and congestion management.*
2. *Develop an in-depth understanding, in terms of architecture, protocols and applications, of major high-speed networking technologies.*
3. *To study network layering and ATM layer.*
4. *To study wireless network operations and functions.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Get an in-depth knowledge of High-Speed Networks and TCP/IP protocols.*
2. *Know about the security and network management.*
3. *Analyze the cause of congestion, traffic slow down and related factors for Quality of Service.*
4. *Understand about ATM and Frame relay.*
5. *Understand resource allocation and service management approaches.*
6. *Explain the major techniques involved, and networks & systems issues for the design and implementation of High-Speed networks.*

**UNIT – I**

**Network Services & Layered Architecture:** Traffic Characterization & Quality of Service – Network Services – High Performance Networks – Network Elements – Basic Network Mechanisms – Layered Architecture.

**UNIT – II**

**ISDN & B-ISDN:** Overview of ISDN – ISDN Channels & User Access – ISDN Protocols – Brief History of B-ISDN & ATM – ATM Based Services and Applications – Principles and Building Block of B-ISDN – General Architecture of B-ISDN – Frame Relay.

**UNIT – III**

**ATM Networks:** Network Layering – Switching of Virtual Channels and Virtual Paths – Applications of Virtual Channels and Connections – QOS Parameters – Traffic Descriptors – ATM Service Categories – ATM Cell Header – ATM Layer – ATM Adaptation Layer.

**UNIT – IV**

**Interconnection Networks:** Introduction – Banyan Networks – Routing Algorithm & Blocking Phenomenon – Batcher-Banyan Networks – Crossbar Switch – Three Stage Class Networks.

**Rearrangeable Networks:** Re-Arrangeable Class Networks – Folding Algorithm – Bens Network – Looping Algorithm.

#### UNIT – V

**ATM Signalling, Routing and Traffic Control:** ATM Addressing – UNI Signalling – PNNI Signalling – PNNI Routing – ABR Traffic Management.

**TCP/IP Networks:** History of TCP/IP – TCP Application and Services – Motivation – TCP – UDP – IP Services and Header Formats – Internetworking – TCP Congestion Control.

**Queue Management:** Passive & Active – QOS in IP Networks – Differentiated and Integrated Services.

**(20EC4007) VOICE and DATA NETWORKS  
(Programme Elective – II)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To understand the basics of wireless voice and data communication technologies.*
2. *To study the working principles of wireless LAN and its standards.*
3. *To build working knowledge on various Data and voice networks.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Design a Voice and Data Network.*
2. *Understand Network Terminology*
3. *Understand Network Terminology and Network Switching.*
4. *Understand about Multiple Access Protocols.*
5. *Design a network with ip addresses and make Subnets of the Networks.*
6. *Understand Quality of Service in Packet Networks.*

**UNIT – I**

Network Design Issues–Network Performance Issues,– Network Terminology, –Centralized and Distributed Approaches for Networks Design, –Issues In Design of Voice and Data Networks. –Layered And Layer Less Communication, Cross Layer Design Of Networks, –Voice Networks (Wired And Wireless) And Switching, Circuit Switching And Packet Switching, – Statistical Multiplexing.

**UNIT – II**

Data Networks and Their Design–Link Layer Design– Link Adaptation–Link Layer Protocols –Retransmission Mechanisms: (ARQ), Hybrid ARQ (HARQ), Go Back N, – Selective Repeat Protocols and Their Analysis.

**UNIT – III**

Queuing Models Of Networks–Traffic Models–Little’s Theorem–Markov Chains, M/M/1 and Other Markov Systems–Multiple Access Protocols, Aloha System, Carrier Sensing–Examples of Local Area Networks.

**UNIT – IV**

**Inter-Networking:** Bridging–Global Internet–IP Protocol And Addressing, Sub Netting, Classless Inter Domain Routing (CIDR)–IP Address Lookup–Routing In Internet–End To End Protocols, TCP And UDP–Congestion Control, Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit/ Fast Recovery.

**UNIT – V**

Congestion Avoidance–RED TCP Throughput Analysis–Quality Of Service In Packet Networks–Network Calculus,–Packet Scheduling Algorithms.

**L T P C**

**3 - - 3**

**(20EC4008) WIRELESS SENSOR NETWORKS  
(Programme Elective –II)**

**COURSE OBJECTIVES**

The objectives of this course:

- 1. To understand the basic WSN technology with basic sensor systems and provide a survey of sensor technology.*
- 2. To understand the medium access control protocols, routing and transport layer protocols for sensor networks and address physical layer issues.*
- 3. To understand the Sensor management, sensor network hardware, operating systems.*
- 4. To associate hardware platforms and software frameworks used to realize dynamic wireless sensor network.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

- 1. Design wireless sensor network system for different applications under consideration.*
- 2. Understand the hardware details of different types of sensors and select right type of sensor for various applications.*
- 3. Understand radio standards and communication protocol to be used for wireless sensor network based systems and application.*
- 4. Use operating systems and programming languages for wireless sensor nodes, performance of wireless sensor networks systems and platforms.*
- 5. Handle special issues related to sensors like energy conservation and security challenges.*
- 6. design and deploy the sensor networks.*

**UNIT –I**

Introduction and Overview of Sensor Network, Architecture and its Applications–Sensor Network Comparison with Adhoc Networks–Sensor Node Architecture with Hardware and Software Details.

**UNIT–II**

**Hardware:** Examples like mica2, micaZ, telosB, cricket, Imote2, tmote, btnode, and Sun SPOT

**Software (Operating Systems):** tinyOS, MANTIS, Contiki, and RetOS – Programming Tools, C, nesC–Performance Comparison of Wireless Sensor Networks–Simulation and Experimental Platforms like Open source (ns-2) and Commercial (QualNet, Opnet)

**UNIT-III**

**Overview of Sensor Network Protocols:** Physical, MAC and Routing/ Network Layer Protocols, Node Discovery Protocols, Multi-hop and Cluster based Protocols, Fundamentals of 802.15.4, Bluetooth, BLE (Bluetooth low energy) and UWB.

**UNIT-IV**

Data Dissemination and Processing, Differences Compared with other Database Management Systems, Data Storage and Query Processing.

**UNIT-V**

**Specialized Features:** Energy Preservation and Efficiency–Security Challenges – Fault Tolerance–Issues related to Localization–Connectivity and Topology.

**Sensor Deployment Mechanisms:** Coverage issues, sensor Web, Sensor Grid - Open Issues for Future Research, and Enabling Technologies in Wireless Sensor Network.

**TEXT BOOKS**

(AUTONOMOUS)**

**I M. Tech. – I Sem.**

**L T P C**

**- - 4 2**

**(20EC4009) ADVANCED DIGITAL SIGNAL PROCESSING LAB (Virtual Lab)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To understand various schemes for digital filter implementations.*
2. *To study different DSP algorithms for computation of DFT.*
3. *To understand various application areas using Signal processing methods.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Analyse various types of discrete and digital signals*
2. *Understand the basic operations on signals*
3. *Analyse the frequency response of the discrete time signals and Systems*
4. *Design FIR and IIR filters using various methods*
5. *Analyse the concept of sampling rate Conversion*
6. *Understand the Properties of Linear Time Invariant Systems*

**List of Experiments:**

1. Study of Sampling theorem, effect of under-sampling.
2. Study of Quantization of continuous-amplitude, discrete-time Analog signals.
3. Study of different types of Companding Techniques.
4. Study of properties of linear time-invariant system.
5. Study of convolution: series and parallel system.
6. Study of Discrete Fourier Transform (DFT) and its inverse.
7. Study of Transform domain properties and its use.
8. Study of FIR filter design using window method: Low pass and high pass filter.
9. Study of FIR filter design using window method: Band pass and Band stop filter.
10. Study of Infinite Impulse Response (IIR) filter.

**Tools Required: MATLAB**

**SIDDARTHA INSTITUTE OF SCIENCE AND TECHNOLOGY :: PUTTUR  
(AUTONOMOUS)**

**I M. Tech. – I Sem.**

**L T P C**

**- - 4 2**

**(20EC4010) ADVANCED DIGITAL SYSTEM DESIGN LAB**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To understand concept of various components.*
2. *To understand concepts that underpins the disciplines of Analog and digital electronic logic circuits.*
3. *To describe Various Number system and Boolean algebra.*
4. *To design and implementation of combinational circuits.*
5. *To design and implementation of sequential circuits.*
6. *To describe Hardware description language.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Achieve Knowledge and Awareness of various components to design stable analog circuits.*
2. *Represent numbers and perform arithmetic operations.*
3. *Minimize the Boolean expression using Boolean algebra and design it using logic gates*
4. *Analyze and design combinational circuit.*
5. *Design and develop sequential circuits.*
6. *Translate real world problems into digital logic formulations using VHDL.*

**List of Experiments:**

**CYCLE-I:**

1. Simulation and Verification of Logic Gates.
2. Design and Simulation of Half adder, Serial Binary Adder, Multi Precession Adder, Carry Look Ahead Adder and Full Adder.
3. Simulation and Verification of Decoder, MUXs, Encoder using all Modeling Styles.
4. Modeling of Flip-Flops with Synchronous and Asynchronous reset.
5. Design and Simulation of Counters-Ring Counter, Johnson Counter, and Up-Down Counter, Ripple Counter.
6. Design of N-bit Register of Serial-in Serial-out, Serial in Parallel out, Parallel in Serial out and Parallel in Parallel Out.
7. Design of Sequence Detector (Finite State Machine-Mealy and Moore Machines).
8. 4-Bit Multiplier, Divider. (for 4-BitOperand)
9. Design ALU to Perform –ADD, SUB, AND-OR, 1's and 2's COMPLIMENT, Multiplication ,Division.

**CYCLE-II:****Digital Circuit Description Using Verilog / VHDL.**

1. Verification of the Functionality of the circuit using function Simulators.
2. Timing Simulator for Critical Path time Calculation.
3. Synthesis of Digital Circuit.
4. Place and Router Techniques for FPGA's like Xilinx, Altera , Cypress ,etc.
5. Implementation of Design using FPGA and CPLD Devices.

**Tools Required:** VHDL or VERILOG

**(20HS0818) ENGLISH FOR RESEARCH PAPER WRITING**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To understand that how to improve writing skills and level of readability.*
2. *To learn about what to write in each section.*
3. *To understand the skills needed when writing a Title.*
4. *To ensure the good quality of paper at very first-time submission.*
5. *To know the strategies and techniques for preparing academic projects.*

**COURSE OUTCOMES(COs)**

On successful completion of this course, the student will be able to

1. *Recognize and demonstrate the style and conventions of research writing.*
2. *Improve the clarity and coherence of their written proposal.*
3. *Use a variety of sentence patterns.*
4. *Enhance their revision and proofreading skills.*
5. *Use effective strategies and techniques to construct their academic projects.*

**UNIT-I**

Planning and Preparation- Word Order- Breaking up long sentences- Structuring Paragraphs and Sentences- Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.

**UNIT-II**

Clarifying Who Did What- Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism- Sections of a Paper, Abstracts and Introduction.

**UNIT-III**

Review of the Literature,-Methods, Results, Discussion, Conclusions and The Final Check.

**UNIT-IV**

Key skills needed when writing Title- Key skills needed when writing abstract- Key skills needed when writing an Introduction- Skills when writing a Review of the Literature.

**UNIT-V**

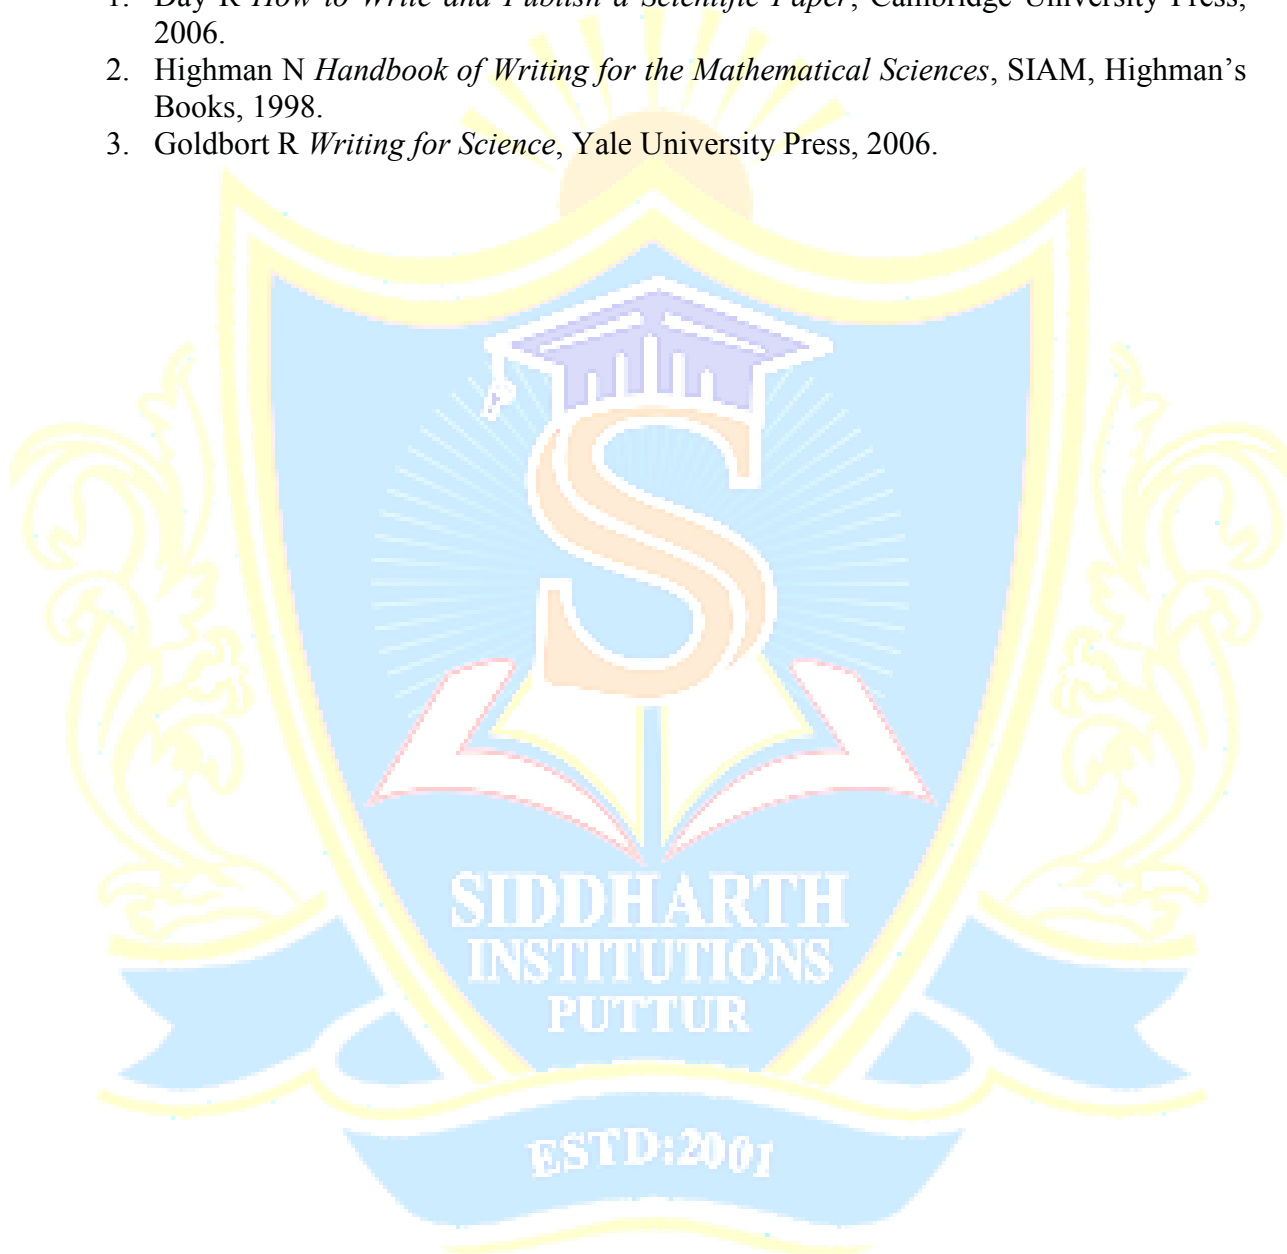

Skills needed when writing the Methods- Skills needed when writing the Results- Skills needed when writing the Discussion- Skills needed when writing the Conclusions.

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>

**(20EC4011) WIRELESS COMMUNICATIONS**

**COURSE OBJECTIVES**

The objectives of this course:

- To provide an overview of Wireless Communication and its applications in communication engineering.*
- To appreciate the contribution of Wireless Communication networks to overall technological growth.*
- To understand the various terminology, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication.*

**COURSE OUTCOMES(COs)**

On successful completion of this course, the student will be able to

- Understand fundamentals of wireless communications and Compare different technologies used for wireless communication systems.*
- To understand large-scale and small-scale fading-channel models, and to analyze their influences on a wireless communication system's performance.*
- Analyse and design receiver and transmitter diversity techniques.*
- Understand various multiple-access techniques for cellular communications, and their advantages and disadvantages*
- Understand the principles and theory of spread spectrum communications with emphasis on CDMA*
- Calculate the capacity of deterministic and random MIMO channels and fading channels.*

**UNIT-I**

**Introduction to Wireless Communications Systems:** Evolution, Examples of Wireless Communication Systems, Comparison–Second Generation Cellular Networks, WLL, Bluetooth and Personal Area Networks.

**UNIT-II**

**Mobile Radio Propagation:** Large-Scale Path Loss, Introduction to Radio Wave Propagation, Free Space Propagation Model, Propagation Mechanisms, Reflection, Ground Reflection (Two-Ray) Model, Diffraction, Scattering. Small-Scale Fading and Multipath, Impulse Response Model of a Multipath Channel, Small- Scale Multipath Measurements, Parameters of Mobile Multipath Channels, Types of Small-Scale Fading, Rayleigh and Ricean Distributions, Statistical Models for Multipath Fading Channels, Theory of Multipath Shape Factors for Small-Scale Fading Wireless Channels.

**UNIT–III**

**Diversity Techniques:** Repetition Coding and Time Diversity–Frequency and Space Diversity, Receive Diversity–Concept of Diversity Branches and Signal Paths– Combining Methods–Selective Diversity Combining –Switched Combining– Maximal Ratio Combining–Equal Gain Combining–Performance Analysis for Rayleigh Fading Channels.

**Cellular Communication:** Cellular Networks, Multiple Access: FDM/TDM/FDMA/ TDMA, Spatial Reuse, Co-Channel Interference Analysis, Hand Over Analysis, Erlang Capacity Analysis, Spectral Efficiency and Grade of Service- Improving Capacity – Cell Splitting and Sectorization.

**UNIT–IV**

**Spread Spectrum and CDMA:** Motivation–Direct Sequence Spread Spectrum– Frequency Hopping Systems, Time Hopping., Anti-Jamming–Pseudo Random (PN) Sequence, Maximal Length Sequences, Gold Sequences, and Generation of PN Sequences.

**Diversity in DS-SS Systems:** Rake Receiver- Performance Analysis. Spread Spectrum Multiple Access, CDMA Systems–Interference Analysis for Broadcast and Multiple Access Channels, Capacity of Cellular CDMA Networks–Reverse Link Power Control, Hard and Soft Hand Off Strategies.

**UNIT–V**

**Fading Channel Capacity:** Capacity of Wireless Channels–Capacity of Flat and Frequency Selective Fading Channels–Multiple Input Multiple Output (MIMO) Systems, Narrow Band Multiple Antenna System Model, Parallel Decomposition of MIMO Channels–Capacity of MIMO Channels.

**Cellular Wireless Communication Standards:** GSM Specifications and Air Interface, Specifications, IS 95 CDMA- 3G Systems: UMTS & CDMA 2000 Standards and Specifications.

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>

**(20EC4012) CODING THEORY & TECHNIQUES**

**COURSE OBJECTIVES**

The objectives of this course:

1. *Introduce the principles and applications of information theory.*
2. *To teach study how information is measured in terms of probability and entropy.*
3. *To teach coding schemes, including error correcting codes.*
4. *Explain how this quantitative measure of information may be used in order to build efficient solutions to multitudinous engineering problems.*

**COURSE OUTCOMES(COs)**

On successful completion of this course, the student will be able to

1. *Knowledge of properties and algorithms of linear block codes.*
2. *Apply coding theory and linear algebra in source coding and channel coding.*
3. *Understand various error control encoding and decoding techniques.*
4. *Knowledge of properties and algorithms of cyclic codes and convolution codes.*
5. *Analyze the performance of error control codes.*
6. *Design BCH codes for Channel performance improvement.*

**UNIT – I**

**Source Coding:** Mathematical model of Information, A Logarithmic Measure of Information, Average and Mutual Information and Entropy – Coding for Discrete less sources, Source coding theorem, fixed length and variable length coding, properties of prefix codes.

**UNIT – II**

**Coding Techniques:** Shannon-Fano coding – Huffman code, Huffman code applied for pair of symbols, efficiency calculations - Lempel-Ziv codes.

**Linear Block Codes:** Introduction to Linear block codes, Generator Matrix, Systematic Linear Block codes, Encoder Implementation of Linear Block Codes – Parity Check Matrix, Syndrome testing, Error Detecting and correcting capability of Linear Block codes.

**UNIT – III**

**Hamming Codes:** Probability of an undetected error for linear codes over a Binary Symmetric Channel, Weight Enumerators and Mac-Williams identities, Perfect codes, Application of Block codes for error control in data storage Systems.

**UNIT – IV**

**Cyclic Codes:** Algebraic structure of cyclic codes, Binary Cyclic code properties, Encoding in systematic and non-systematic form – Encoder using  $(n-k)$  bit shift register, Syndrome Computation and Error detection, Decoding of Cyclic Codes.

**Convolutional Codes:** Encoding of Convolutional codes, Structural properties of Convolutional codes, state diagram, Tree diagram, Trellis Diagram, Maximum Likelihood decoding of Convolutional codes.

**UNIT – V**

Viterbi Algorithm, Fano and Stack Sequential decoding algorithms, Application of Viterbi and sequential decoding.

**BCH Codes:** Groups – fields, binary Fields arithmetic, construction of galois fields  $GF(2^m)$ , Basic properties of galois Fields, Computation using galois Field  $GF(2^m)$  arithmetic - Description of BCH codes, Decoding procedure for BCH codes.

**(20EC4109) INTRODUCTION TO IoT  
(Programme Elective –III)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To provide an overview on the ICT ecosystem and enabling environment to foster Internet of Things (including technology, standards, system management and applications) deployments.*
2. *Define the infrastructure for supporting IoT deployments.*
3. *To provide an understanding of the technologies and the standards relating to the Internet of Things.*
4. *Understand various case studies related to IoT domain.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Understand the technology and standards relating to IoTs..*
2. *Understand where the IoT concept fits within the broader ICT industry and possible future trends.*
3. *Understand the key components that make up an IoT system.*
4. *Differentiate between the levels of the IoT stack and be familiar with the key technologies and protocols employed at each layer of the stack.*
5. *Configure Raspberry Pi, Understand Sensors, Actuators & get started with python on Raspberry Pi.*
6. *Apply the knowledge and skills acquired during the course to design, build and test a complete, working IoT system involving prototyping, programming and data analysis.*

**UNIT – I**

**Introduction & Concepts:** Introduction to Internet of Things – Physical Design of IOT – Logical Design of IoT – IoT Enabling Technologies – IoT Levels.

**UNIT – II**

**Domain Specific IoTs:** Home Automation – Cities – Environment – Energy – Retail - Logistics – Agriculture – Industry - Health & Life Style.

**UNIT – III**

**M2M & System Management with NETCONF-YANG:** M2M – Difference between IoT and M2M – SDN and NFV for IoT – Software defined Networking – Network Function Virtualization – Need for IOT Systems Management – Simple Network Management Protocol – Limitations of SNMP – Network Operator Requirements – NETCONF – YANG – IOT Systems management with NETCONF-YANG.

**UNIT – IV**

**Developing Internet of Things & Logical Design using Python:** Introduction, IoT Design Methodology – Installing Python – Python Data Types & Data Structures – Control Flow – Functions – Modules – Packages – File Handling – Date/ Time Operations – Classes – Python Packages.

**UNIT – V**

**IoT Physical Devices & Endpoints:** What is an IoT Device – Exemplary Device – Board, Linux on Raspberry Pi – Interfaces and Programming IoT Devices.

**(20EC4013) ADAPTIVE SIGNAL PROCESSING  
(Programme Elective –III)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *Introduce to the concept and need of adaptive filters and popular adaptive signal processing algorithms.*
2. *To understand the basic characteristics of adaptive system.*
3. *To make familiar with gradient search algorithms and functions.*
4. *To introduce LMS & RLS algorithms.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Comprehend adaptive system and functions.*
2. *Understand the design criteria for a linear adaptive processor.*
3. *Develop different adaptive modelling systems.*
4. *Understand the properties of Kalman filtering.*
5. *Compare Kalman filter with extended Kalman filter.*
6. *Understand the properties of Non-Linear Adaptive Filtering.*

**UNIT – I**

**Eigen Analysis:** Eigen Value Problem, Properties of Eigen values and Eigen vectors, Eigen Filters, Eigen Value computations.

**Introduction to Adaptive Systems:** Definitions, Characteristics, Applications, Example of an Adaptive System– The Adaptive Linear Combiner, Description, Weight Vectors, Desired Response Performance function, Gradient & Mean Square Error.

**UNIT – II**

**Development of Adaptive Filter Theory & Searching the Performance Surface:** Introduction to Filtering, Smoothing and Prediction, Linear Optimum Filtering, Problem Statement, Principle of Orthogonality, Minimum Mean Square Error, Wiener- Hopf Equations, Error Performance, Minimum Mean Square Error.

**Searching the Performance Surface:** Methods & Ideas of Gradient Search Methods, Gradient Searching Algorithm & its Solution, Stability & Rate of Convergence -Learning Curves.

**UNIT – III**

**Steepest Descent Algorithms:** Gradient Search by Newton's Method, Method of Steepest Descent, Comparison of Learning Curves.

**LMS Algorithm & Applications:** Overview, LMS Adaptation algorithms, Stability & Performance Analysis of LMS Algorithms, LMS Gradient & Stochastic Algorithms,

Convergence of LMS Algorithm.

**Applications:** Noise Cancellation, Cancellation of Echoes in Long Distance Telephone Circuits, Adaptive Beamforming.

#### UNIT – IV

**RLS Algorithm:** Matrix Inversion lemma, Exponentially Weighted Recursive Least Square Algorithm, Update Recursion for The Sum of Weighted Error Squares, Convergence Analysis of RLS Algorithm, Application of RLS algorithm on Adaptive Equalization.

#### UNIT – V

**Kalman Filtering:** Introduction, Recursive Mean Square Estimation Random Variables, Statement of Kalman Filtering problem, Filtering, Initial Conditions, Variants of Kalman filtering, Extend Kalman Filtering.

**Non-Linear Adaptive Filtering:** Theoretical and Practical Considerations of Blind Deconvolution, Buss Gang Algorithm for Blind Equalization of Real Baseband Channels.

**(20EC4014) COGNITIVE RADIO  
(Programme Elective –III)**

**COURSE OBJECTIVES**

The objectives of this course:

- 1.To understand the spectrum scarcity problem and cognitive radio deals with problem.*
- 2.To understanding on cognitive radio components, functions and capabilities.*
- 3.To evaluate different spectrum sensing mechanisms in cognitive radio*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

- 1. Demonstrate an understanding on software defined radio architecture and design principles.*
- 2. Demonstrate an understanding on cognitive radio components, functions and capabilities and Emerging issues in cognitive radio network.*
- 3. Evaluate different spectrum sensing mechanisms and spectrum sharing models*
- 4. Analyse the spectrum management functions using cognitive radio systems and cognitive radio networks.*
- 5. Demonstrate an understanding on cooperative communications.*
- 6. Fundamental issues regarding dynamic spectrum access and radio-resource management.*

**UNIT – I**

**Introduction To Cognitive Radio:** Digital Dividend – Cognitive Radio (CR) Architecture – Functions of Cognitive Radio – Dynamic Spectrum Access (DSA) – Components of Cognitive Radio – Spectrum Sensing, Spectrum Analysis and Decision – Potential Applications of Cognitive Radio.

**UNIT – II**

**Spectrum Sensing:** Spectrum Sensing – Detection of Spectrum Holes (TVWS) – Collaborative Sensing – Geo-Location Database and Spectrum Sharing Business Models (Spectrum of Commons, Real Time Secondary Spectrum Market).

**UNIT – III**

**Optimization Techniques of Dynamic Spectrum Allocation:** Linear Programming – Convex Programming – Non-Linear Programming – Integer Programming – Dynamic Programming – Stochastic Programming.

**UNIT – IV**

**Dynamic Spectrum Access and Management:** Spectrum Broker – Cognitive Radio Architectures – Centralized Dynamic Spectrum Access – Distributed Dynamic Spectrum Access – Learning Algorithms and Protocols.

**UNIT – V**

**Spectrum Trading:** Introduction to Spectrum Trading – Classification to Spectrum Trading – Radio Resource Pricing – Brief Discussion on Economics Theories in DSA (Utility, Auction Theory) – Classification of Auctions (Single Auctions, Double Auctions, Concurrent, Sequential).

**Research Challenges in Cognitive Radio:** Network Layer and Transport Layer Issues – Cross Layer Design for Cognitive Radio Networks.

**(20EC4015) IMAGE & VIDEO PROCESSING  
(Programme Elective –IV)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *Develop an overview of the field of image processing.*
2. *Understand the fundamental algorithms and how to implement them.*
3. *Prepare to read the current image processing research literature.*
4. *Gain experience in applying image processing algorithms to real problems.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *describe and use the principles of digital image and video processing to develop image processing algorithms.*
2. *implement (for example with MATLAB) and assess the developed image processing algorithms.*
3. *explain algorithm design choices using the principles of digital image/video processing*
4. *develop image processing algorithms for a given practical image/video processing problem*
5. *solve more advanced problems in all areas mentioned above*
6. *identify and explain the challenges, propose possible solutions, and explain the chosen algorithm design*

**UNIT – I**

**Image Representation:** Gray Scale And Color Images– Image Sampling And Quantization– Two Dimensional Orthogonal Transforms: DFT, WT, HAAR Transform, KLT, And DCT.

**UNIT – II**

**Image Enhancement:** Filters In Spatial And Frequency Domains– Histogram Based Processing, And Homo morphic Filtering– Edge Detection, Non-Parametric And Model Based Approaches– LOG Filters– Localization Problem.

**UNIT – III**

**Image Restoration:** Degradation Models, PSF, Circulant And Block Circulant Matrices – De-Convolution – Restoration Using Inverse Filtering: Wiener Filtering And Maximum Entropy Based Methods – Morphological Operations.

**Image Segmentation:** Pixel Classification – Bi-Level Thresholding – Multi-Level Thresholding: P-Tile Method, Adaptive Thresholding – Spectral & Spatial Classification – Hough Transform – Region Growing.

**UNIT – IV**

**Image Compression:** Compression Models – Information Theoretic Perspective – Fundamental Coding Theorem.

**Lossless Compression:** Huffman Coding – Arithmetic Coding – Bit Plane Coding – Run Length Coding – Lossy Compression: Transform Coding, Image Compression Standards.

**UNIT – V**

**Video Processing:** Representation Of Digital Video – SpatioTemporal Sampling – Motion Estimation – Motion Compensation – Video Filtering, Video Compression – Video Coding Standards.

**(20EC4016) PATTERN RECOGNITION AND MACHINE LEARNING  
(Programme Elective –IV)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *Understand the concept of a pattern and the basic approach to the development of pattern recognition and machine intelligence algorithms*
2. *To equip students with basic mathematical and statistical techniques commonly used in pattern recognition.*
3. *To introduce students to a variety of pattern recognition algorithms.*
4. *Enable students to apply machine learning concepts in real life problems.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Able to understand the Bayesian approach to pattern recognition.*
2. *Able to Understand Linear Models for Regression and Classification.*
3. *Analyze the performance of neural networks.*
4. *Able to Understand Linear Discriminant Functions for Machine Learning.*
5. *Able to Understand Algorithm Independent Machine Learning.*
6. *Design and implement a refined machine learning solution*

**UNIT – I**

**Introduction to Pattern Recognition:** Problems, Applications, Design Cycle, Learning and Adaptation, Examples, Probability Distributions, Parametric Learning – Maximum Likelihood and Bayesian Decision Theory – Bayes Rule, Discriminant Functions, Loss Functions and Bayesian Error Analysis.

**UNIT – II**

**Linear Models:** Linear Models for Regression, Linear Regression, Logistic Regression, Linear Models for Classification.

**UNIT – III**

**Neural Network:** Perceptron, Multi-Layer Perceptron, Back propagation Algorithm, Error Surfaces, Practical Techniques for Improving Back propagation, Additional Networks and Training Methods, Adaboost, Deep Learning.

**UNIT – IV**

**Linear Discriminant Functions:** Decision Surfaces, Two-Category, Multi-Category, Minimum Squared Error Procedures, Ho-Kashyap Procedures, Linear Programming

Algorithms, Support Vector Machine.

#### UNIT – V

**Algorithm Independent Machine Learning:** Lack of Inherent Superiority of any Classifier, Bias and Variance, Re-Sampling for Classifier Design, Combining Classifiers.

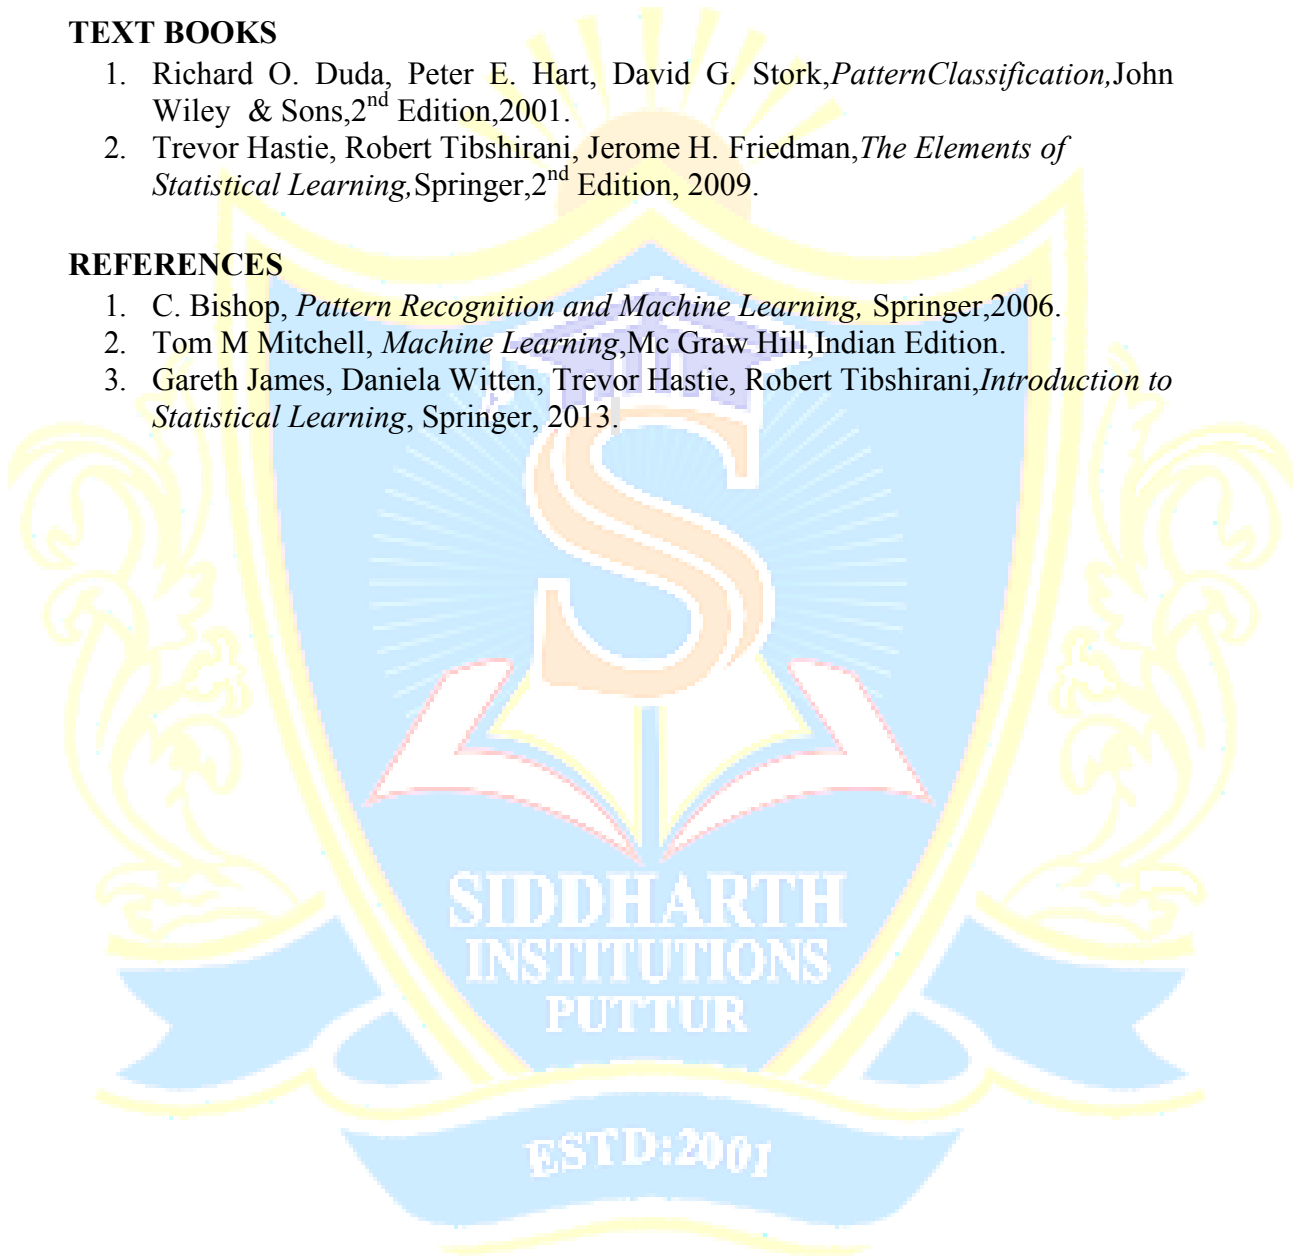

**Unsupervised Learning and Clustering:** K-Means Clustering, Fuzzy K-Means Clustering, Hierarchical Clustering.

**3 - - 3**

**(20EC4017) DETECTION & ESTIMATION OF SIGNALS  
(Programme Elective –IV)**

**COURSE OBJECTIVES**

The objectives of this course:

- 1. The subject of signal detection and estimation is concerned with the processing of information-bearing signals for the purpose of making inferences about the information that they contain.*
- 2. To introduce the fundamental theoretical principles are underlying the development and analysis of techniques for such processing.*
- 3. To analyze the sufficient statistics and statistical estimation of the parameters for exponential families.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

- 1. Analyze the fundamental concepts of Signal Detection and Estimation.*
- 2. Understand familiarize with different Hypotheses in detection and estimation problems*
- 3. Analyze classical and Bayesian approaches to formulate and solve problems for parameter estimation from noisy signals.*
- 4. To understand the methods of Detection and estimation of signals in white and non-white Gaussian noise.*
- 5. Analyze the time varying waveform detection and its estimation.*
- 6. Understand the Exponential Families of Distributions*

**UNIT – I**

**Detection Theory:** Binary Decisions – Single Observation – Maximum Likelihood Decision Criterion – Neyman-Pearson Criterion – Probability of Error Criterion – Bayes Risk Criterion – Min-Max Criterion – Robust Detection – Receiver Operating Characteristics.

**UNIT – II**

**Binary Decisions – Multiple Observations:** Vector Observations – The General Gaussian Problem – Waveform Observation in Additive Gaussian Noise, The Integrating Optimum Receiver – Matched Filter Receiver.

**UNIT – III**

**Estimation Theory:** Methods – Maximum Likelihood Estimation – Bayes Cost Method – Bayes Estimation Criterion – Mean Square Error Criterion – Uniform Cost Function – Absolute Value Cost Function – Linear Minimum Variance – Least Squares Method –

Estimation in the Presence of Gaussian Noise – Linear Observation – Non-Linear Estimation.

#### UNIT – IV

**Properties of Estimators:** Bias – Efficiency – Cramer-Rao Bound Asymptotic Properties – Sensitivity and Error Analysis.

**State Estimation:** Prediction –Kalman Filter.

#### UNIT – V

**Sufficient Statistics and Statistical Estimation of Parameters:** Concept of Sufficient Statistics – Exponential Families of Distributions – Exponential Families and Maximum Likelihood Estimation – Uniformly Minimum Variance Unbiased Estimation.

**(20EC4018) ADVANCED COMMUNICATIONS LAB (Virtual Lab)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To understand the concept of Frequency Reuse.*
2. *To understand the different advanced communication techniques and their importance in Real time applications.*
3. *To evaluate the Beam pattern of microwave antennas.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Understand the concepts behind various digital signaling schemes for fading channels.*
2. *Understand the concept of co-channel interference & Signal to Interference and Noise Ratio.*
3. *Understand the importance of Sectoring & Handoff.*
4. *Understand the impact of shadowing and path loss exponent on boundary coverage probability.*
5. *Understand the various Path losses that occur in real time.*
6. *Analyze various parameters frequency, SINR, Beam pattern*

**List of Experiments:**

1. Understanding of Path loss.
2. Path loss with Shadowing.
3. Horizontal and Vertical Beam Pattern.
4. Calculation of Boundary Coverage Probability.
5. Calculation of SINR including Beam Tilt.  
A: Downlink  
B: Uplink
6. Frequency Reuse  
A: Co-Channel Cells.  
B: Cell Cluster.
7. Sectoring.
8. Handoff.
9. Flat Fading.
10. Frequency Selective Fading.

**(20EC4019) IMAGE & VIDEO PROCESSING LAB****COURSE OBJECTIVES**

The objectives of this course:

1. *To expose students to basic principles and advanced concepts of digital image processing.*
2. *To design and implement algorithms that perform basic image processing operations like filtering of noise and image enhancement.*
3. *To design, analyze and implement algorithms for advanced image analysis like image compression, image reconstruction, image segmentation.*
4. *To enable students to implements solutions for complex image processing problems.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Examine various types of images, intensity transformations and applying various filtering techniques.*
2. *Identify the suitable image enhancement and restoration techniques based upon the application.*
3. *Show how higher-level image concepts such as edge detection, segmentation, representation can be implemented and used.*
4. *Manipulate both binary and grayscale digital images using morphological filters and operators to achieve a desired result.*
5. *Apply image processing algorithms in practical applications.*
6. *Able to analyze the video enhancement using algorithms.*

**List of Experiments:**

1. Perform basic operations on images like addition, subtraction etc.
2. Plot the histogram of an image and perform histogram equalization.
3. Implement segmentation algorithms.
4. Perform video enhancement.
5. Perform video segmentation.
6. Perform image compression using lossy technique.
7. Perform image compression using lossless technique.
8. Perform image restoration.
9. Convert a colour model into another.
10. Calculate boundary features of an image.
11. Calculate regional features of an image.
12. Detect an object in an image/video using template matching/ Bayes classifier.

**(20HS0829) CONSTITUTION OF INDIA**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To know the premises informing the twin themes of liberty and freedom from a civil rights perspective.*
2. *To address the growth of Indian opinion regarding modern Indian intellectuals 'constitutional role*
3. *To address entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.*
4. *To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution*
5. *To acquire knowledge for various competitive examinations*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Explain the key concepts of political economy*
2. *Analyse the significant developments in the political ideologies*
3. *Describe the salient features of the constitution of India interpret, integrate and critically*
4. *Analyse the political economy of Indian international relations and gain knowledge in Judiciary system*
5. *Apply their knowledge and skills acquired to write various competitive examinations*

**UNIT-I**

Introduction to the Constitution.

**UNIT-II**

Historical Perspective of the Constitution of India- Salient features and characteristics of the Constitution of India.

**UNIT-III**

Scheme of the fundamental rights-The scheme of the Fundamental Duties and its legalstatus-The Directive Principles of State Policy – Its importance and implementation.

**UNIT-IV**

Parliamentary Form of Government in India – Powers and Functions-The President of India - Status and Powers -The historical perspectives of the constitutional amendments inIndia- Judiciary system - Powers and Functions

**UNIT-V**

Local Self Government – Constitutional Scheme in India - Election Commission: Role and Functions.

**TEXT BOOKS**

1. Government of India Ministry of Law and Justice (Legislative Department) *The Constitution of India, 1950 (Bare Act)* Government Publication, 2015.
2. Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, Government Publication 2015.

**(20EC4021 ) OPTICAL NETWORKS**  
**(Programme Elective - V)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To develop the knowledge on various components of optical networks, optical layers and losses.*
2. *To understand the multiplexing techniques, fiber characteristics, optical amplifiers and cross connectors.*
3. *To understand the network management, access networks, internetworking and its layers.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Describe the various layers involved in network & Recall basic laws of optical physics.*
2. *Identify the necessity for using couplers and connectors in energy transmission.*
3. *Identify the various multiplexing the techniques.*
4. *Recall basic of multiplexers add/drop.*
5. *Able to know different types of protection in SONET/SDH.*
6. *Explain the use of cost tradeoffs & Able to know the overview of access network.*

**UNIT – I**

**Optical Fiber Components:** Couplers, Isolators and Circulators, Multiplexers, Bragg grating, Fabry-perot Filters, Mach zender interferometers, Arrayed waveguide grating, Tunable filters, Hi-channel count multiplexer architectures, Optical amplifiers, Direct and External modulation transmitters, Pump sources for amplifiers, Optical switching and Wave length converters.

**UNIT – II**

**Client Layers of Optical Networks:** SONET / SDH – Multiplexing, Frame Structure, Physical Layer, Infrastructure, ATM – Functions, Adaptation layers, QoS, Flow Control Signaling and Routing, IP – Routing, QoS, MPLS, Storage Area Networks – ESCON, Fiber Channel, HIPPI.

**UNIT – III**

**WDM Network Elements and Design:** Optical Line Terminals and Amplifiers, Add/Drop Multiplexers, Optical Cross Connects, Cost trade-offs in Network Design, LTD and RWA Problems, Dimensioning – Wavelength Routing Networks.

**UNIT – IV**

**Network Control, Management and Survivability:** Network Management Functions, Optical Layer Services and Interfacing, Layers within Optical Layer, Multivendor Interoperability, Performance and Fault Management, Basic Concepts of Survivability, Protection in SONET/SDH Links and Rings, Protection in IP Networks, Optical Layer Protection – Service Classes, Protection Schemes, Interworking between Layers.

**UNIT – V**

**Access Networks and Photonic Packet Switching:** Network Architecture, Enhanced HFC, FTTC, Photonic Packet Switching – OTDM, Synchronization, Header Processing, Buffering, Burst Switching.

**TEXT BOOKS**

**(20EC4213) TESTING & TESTABILITY  
(Programme Elective - V)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To know Fundamentals of Testing and Testability, different levels of modeling and simulation, Fault models and Automatic Test Pattern Generation.*
2. *To develop Testability Trade-Offs, Scan Architectures and Compression Techniques.*
3. *To understand BIST Concepts, Test Pattern Generation and Advanced BIST Concepts, Memory Test Architectures, In Circuit Testing (ICT), JTAG Testing Features.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Understand the elementary concepts of Testing and Testability.*
2. *Understand different types of faults associated with logic circuits and types of testing by employing fault models to the logic circuits.*
3. *Get complete knowledge about different methods of simulation and algorithms associated with testing.*
4. *Analyze BIST concepts and design self-test at Board Level.*
5. *Analyze Memory Test Requirements for MBIST and Embedded Core Testing.*
6. *Apply the concepts in testing which can help them design a better yield in IC design.*

**UNIT – I**

**Introduction to Test and Design for Testability (DFT) Fundamentals:** Modeling: Modeling Digital Circuits at Logic Level, Register Level and Structural Models, Levels of Modeling, Logic Simulation: Types of Simulation, Delay Models, Element Evaluation, Hazard Detection, Gate Level Event Driven Simulation.

**UNIT – II**

**Fault Modeling:** Logic Fault Models, Fault Detection and Redundancy, Fault Equivalence and Fault Location. Single Stuck and Multiple Stuck – Fault Models. Fault Simulation Applications, General Techniques for Combinational Circuits.

**Testing for Single Stuck Faults (SSF):** Automated Test Pattern Generation (ATPG/ATG) for SSFs in Combinational and Sequential Circuits, Functional Testing with Specific Fault Models.

**UNIT – III**

**Design For Testability:** Testability Trade-Offs, Techniques, Scan Architectures and Testing – Controllability and Absorbability, Generic Boundary Scan, Full Integrated Scan, Storage Cells for Scan Design, Board Level and System Level DFT Approaches, Boundary Scans Standards, Compression Techniques – Different Techniques, Syndrome Test and Signature Analysis.

**UNIT – IV**

**Built-In Self-Test (BIST):** BIST Concepts and Test Pattern Generation. Specific BIST Architectures: CSBL, BEST, RTS, LOCST, STUMPS, CBIST, CEBS, RTD, SST, CATS, CSTP, BILBO. Brief Ideas on Some Advanced BIST Concepts and Design for Self- Test at Board Level

**UNIT – V**

**Memory BIST (MBIST):** Memory Test Architectures and Techniques – Introduction to Memory Test, Types of Memories and Integration, Embedded Memory Testing Model. Memory Test Requirements for MBIST

**Brief Ideas on Embedded Core Testing:** Introduction to Automatic in Circuit Testing (ICT), JTAG Testing Features.

**(20EC4022) RF AND MICROWAVE CIRCUIT DESIGN  
(Programme Elective -V)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To understand the concepts of microwave network analysis.*
2. *To design various impedance matching devices and knowledge of passive microwave components.*
3. *To understand the analysis of Waveguides and gain complete knowledge about microwave components.*
4. *To Analyze and study about the characteristics of microwave tube generators and amplifiers.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Establish and develop the overall knowledge of RF and microwave circuits and devices and relation between different parameters.*
2. *Design impedance matching network for any transmission line or system and familiarity with passive microwave components.*
3. *Use Smith Chart in RF applications.*
4. *Model and analyze the characteristics of microwave semiconductor diodes and transistors.*
5. *Analyze and find applications and limitations of microwave tube Generators and Amplifiers.*
6. *Evaluate the Performance of RF active circuits through EDA tools.*

**UNIT-I**

**Transmission Line Theory:** Lumped Element Circuit Model for Transmission Line, Field Analysis, The Smith Chart, Quarter Wave Transformer, Generator and Load Mismatch – Impedance Matching and Tuning.

**UNIT-II**

**Microwave Network Analysis:** Impedance and Equivalent Voltage and Current, Impedance and Admittance Matrix, Scattering Matrix, Transmission Matrix, Signal Flow Graph.

**UNIT-III**

**Microwave Components:** Microwave Resonators – Microwave Filters – Power Dividers and Directional Couplers, Ferromagnetic Devices and Components. Nonlinearity and Time

Variance – Inter-Symbol Interference –Random Process & Noise, Definition of Sensitivity and Dynamic Range, Conversion Gain and Distortion.

#### UNIT-IV

**Microwave Semiconductor Devices and Modeling:** PIN Diode, Tunnel Diode, Varactor Diode, Schottky Diode, IMPATT And TRAPATT Devices, Transferred Electron Devices, Microwave BJTs, GaAs FETs, Low Noise and Power GaAs FETs, MESFET, MOSFET, HEMT.

#### UNIT-V

**Amplifiers Design:** Power Gain Equations, Stability, Impedance Matching, Constant Gain and Noise Figure Circles, Small Signal, Low Noise, High Power and Broadband Amplifier, Oscillators, Mixers Design.

**(20HS0824) BUSINESS ANALYTICS  
(Open Elective)**

**COURSE OBJECTIVES**

The objectives of this course

1. *Understand the concepts and methods of business analytics.*
2. *To gain an understanding of how managers use business analytics to formulate and solve business problems and to support managerial decision making.*
3. *To become familiar with processes needed to develop, report, and analyze business data.*

**COURSE OUTCOMES (COs)**

On successful completion of course, the student will be able to

1. Analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization.
2. Design alternatives to solve business problems utilizing quantitative analysis, critical thinking and sound ethical decision making.
3. Summarize, process and transform data for obtaining meaningful conclusions
4. Interpret data using latest data analytics tools to address organisational problems
5. Organize and critically apply the concepts and methods of business analytics
6. Assess decision problems and build models for creating solutions using business analytical tools.

**UNIT- I**

**Business analytics:** Overview of Business analytics - Scope of Business analytics - Business Analytics Process - Relationship of Business Analytics Process and organisation - competitive advantages of Business Analytics - Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview.

**UNIT- II**

**Trendiness and Regression Analysis:** Modelling Relationships and Trends in Data - simple Linear Regression - Important Resources - Business Analytics Personnel - Data and models for Business analytics - problem solving - Visualizing and Exploring Data, Business Analytics Technology

**UNIT- III**

**Organization Structures of Business analytics:** Team management - Management Issues - Designing Information Policy – Outsourcing - Ensuring Data Quality - Measuring contribution of Business analytics - Managing Changes - Descriptive Analytics - predictive analytics - predicative Modelling - Predictive analytics analysis - Data Mining - Data Mining Methodologies - Prescriptive analytics and its step in the business analytics Process - Prescriptive Modelling - nonlinear Optimization.

**UNIT- IV**

**Forecasting Techniques:** Qualitative and Judgmental Forecasting - Statistical Forecasting Models - Forecasting Models for Stationary Time Series - Forecasting Models for Time Series with a Linear Trend - Forecasting Time Series with Seasonality - Regression Forecasting with Casual Variables - Selecting Appropriate Forecasting Models - Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform - New-Product Development Model - Newsvendor Model - Overbooking Model - Cash Budget Model.

**UNIT- V**

**Decision Analysis:** Formulating Decision Problems - Decision Strategies with the Outcome Probabilities - Decision Trees - The Value of Information - Utility and Decision Making - Recent Trends in Embedded and collaborative business intelligence - Visual data recovery - Data Storytelling and Data journalism.

**TEXT BOOKS**

**II M.Tech- I Sem.**

**L   T   P   C**

**3   -   -   3**

**(20CE1028) COST MANAGEMENT OF ENGINEERING PROJECTS  
(Open Elective)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *Establish systems to help streamline the transactions between corporate support departments and the operating units.*
2. *Devise transfer pricing systems to coordinate the buyer-supplier interactions between decentralized organizational operating units.*
3. *Use pseudo profit centres to create profit maximizing behaviour in what were formerly cost centres.*

**COURSE OUTCOMES (COs)**

*At the end of the course, the student should be able to*

1. **Summarise** the concept of strategic cost management, strategic cost analysis – target costing, life cycle costing and Kaizen costing and the cost drive concept.
2. **Describe** the decision-making; relevant cost, differential cost, incremental cost and opportunity cost, objectives of a costing system.
3. **Summarise** the meaning and different types of project management and project execution, detailed engineering activities.
4. **Understand** the project contracts,
5. **Describe** the cost behaviour and profit planning types and contents, Bar charts and Network diagram.
6. **Analyse** by using quantitative techniques for cost management like PERT/CPM.

**UNIT – I**

Introduction and Overview of the Strategic Cost Management Process.

**UNIT-II**

**Cost Concepts:** Cost concepts in decision-making - Relevant cost - Differential cost - Incremental cost and Opportunity cost - Objectives of a Costing System - Inventory valuation - Creation of a Database for operational control - Provision of data for Decision Making.

**Unit – III**

**Project Management:** Project: meaning - Different types - why to manage - cost overruns centers - various stages of project execution: conception to commissioning - Project execution as conglomeration of technical and nontechnical activities - Detailed Engineering activities - Pre project execution main clearances and documents - Project team: Role of each member - Importance Project site: Data required with significance - Project contracts -

Types and contents - Project execution Project cost control - Bar charts and Network diagram - Project commissioning: mechanical and process.

#### UNIT – IV

**Cost Behavior and Profit Planning:** Cost Behavior and Profit Planning Marginal Costing - Distinction between Marginal Costing and Absorption Costing - Break-even Analysis - Cost-Volume-Profit Analysis - Various decision-making problems - Standard Costing and Variance Analysis - Pricing strategies: Pareto Analysis - Target costing - Life Cycle Costing - Costing of service sector - Just-in-time approach - Material Requirement – Planning - Enterprise Resource Planning - Total Quality Management and Theory of constraints - Activity-Based Cost Management - Bench Marking - Balanced Score Card and Value-Chain Analysis - Budgetary Control - Flexible Budgets - Performance budgets - Zero-based budgets - Measurement of Divisional profitability pricing decisions including transfer pricing.

#### UNIT-V

**Quantitative Techniques:** Quantitative techniques for cost management - Linear Programming, PERT/CPM - Transportation Problems - Assignment problems – Simulation - Learning Curve Theory.

#### TEXT BOOKS

**(20EE2128) WASTE TO ENERGY  
(Open Elective)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To learn different types of waste materials available for energy conversion*
2. *To understand Pyrolytic oil and gases*
3. *To introduce gasification methods for biomass*
4. *To learn concepts of biomass resources, combustion types and biogas plant technology*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Analyse agro based, forest residue and industrial waste conversion processes.*
2. *Manufacture of Pyrolytic oils and gases*
3. *Manufacture of charcoal, yields and applications*
4. *Understand various types of gasifiers operation*
5. *Understand inclined and fluidized bed combustors operation*
6. *Understand types of biogas plants and biomass energy programme in India*

**UNIT- I**

**Introduction to Energy from waste:** Classification of waste as fuel –Agro based- Forest residue- Industrial waste- MSW- conversion devices- Incinerators- Gasifiers- Digestors.

**UNIT- II**

**Bio-mass Pyrolysis:** Pyrolysis- Types- Slow-Fast- Manufacture of Charcoal- methods- yields and application. Manufacture of Pyrolytic oils and gases – yields and applications.

**UNIT- III**

**Biomass Gasification:** Gasifiers- Fixed bed system- Downdraft and Updraft gasifiers- Fluidized bed gasifiers- construction and operation- Gasifier burner arrangement for thermal heating.

**UNIT- IV**

**Biomass Combustion:** Biomass stoves- Types- Inclined combustors- Fluidized bed combustors- construction and operation of above biomass combustors.

**UNIT- V**

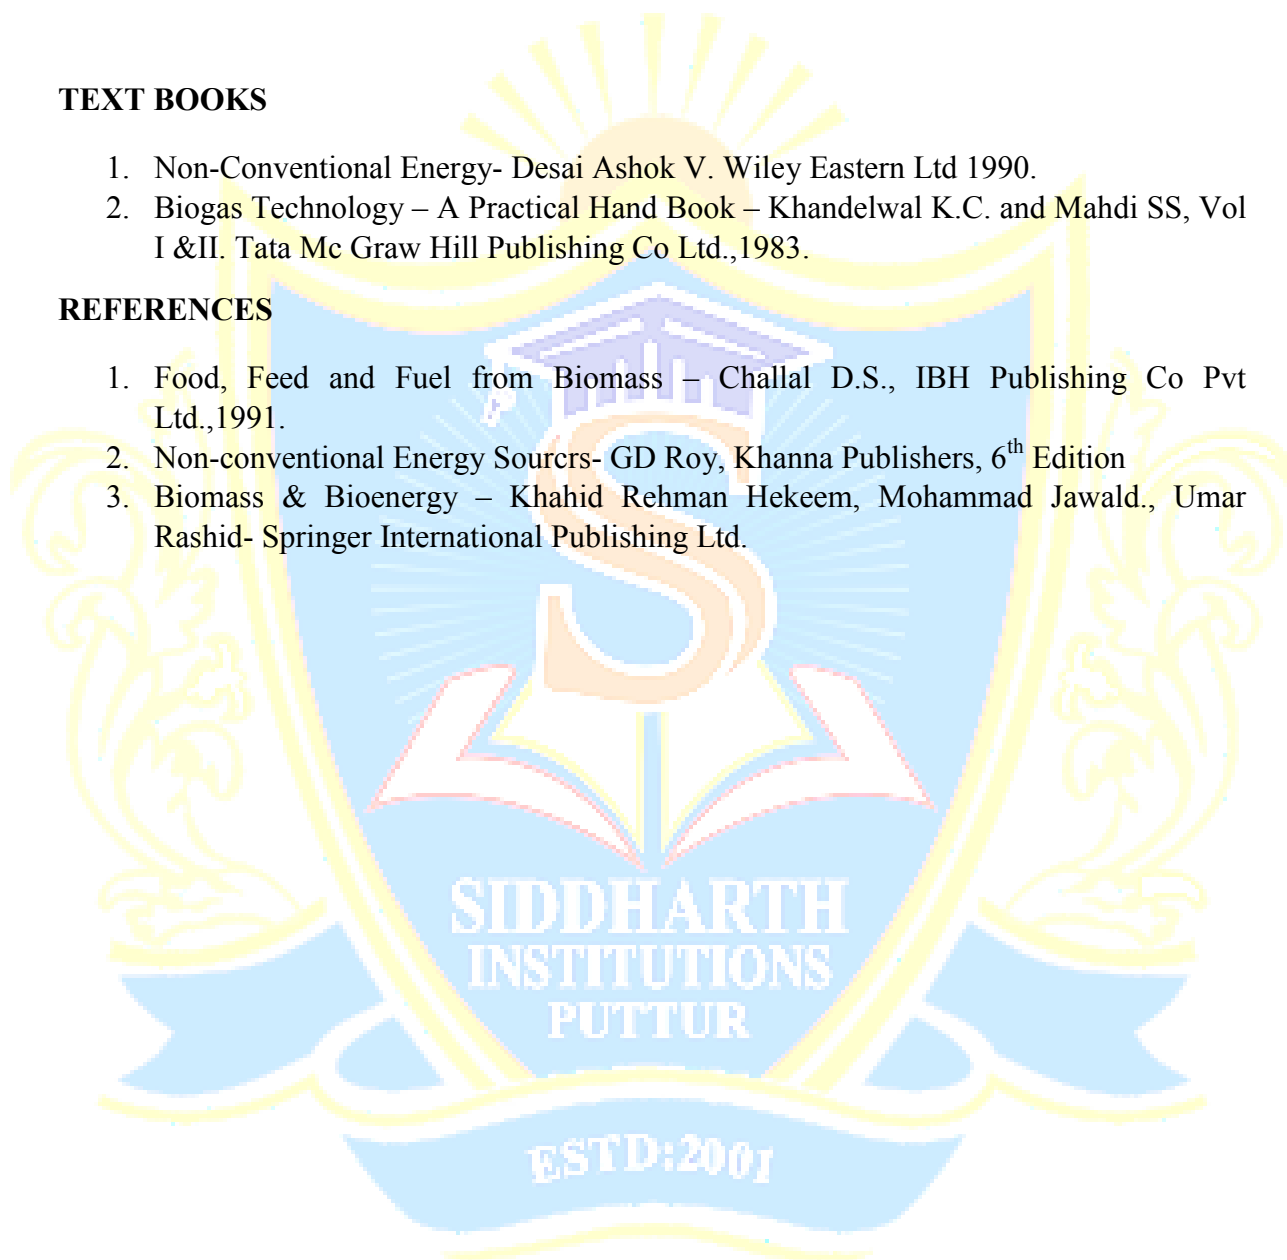

**Properties of Biogas:** Biogas plant Technology and status – Biomass resources and their classification- Biomass conversion processes- thermo chemical conversion –Direct Combustion- Biomass gasification- Pyrolysis and liquefaction – bio-chemical conversion- anaerobic digestion- Types of biogas plants- applications-Biomass Energy Programme in India.

**TEXT BOOKS**

1. Non-Conventional Energy- Desai Ashok V. Wiley Eastern Ltd 1990.
2. Biogas Technology – A Practical Hand Book – Khandelwal K.C. and Mahdi SS, Vol I &II. Tata Mc Graw Hill Publishing Co Ltd.,1983.

**REFERENCES**

1. Food, Feed and Fuel from Biomass – Challal D.S., IBH Publishing Co Pvt Ltd.,1991.
2. Non-conventional Energy Sources- GD Roy, Khanna Publishers, 6<sup>th</sup> Edition
3. Biomass & Bioenergy – Khahid Rehman Hekeem, Mohammad Jawald., Umar Rashid- Springer International Publishing Ltd.

**3 - - 3**

**(20ME3026) INDUSTRIAL SAFETY  
(Open Elective)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To learn about mechanical and electrical hazards.*
2. *To learn about Fundamentals of Maintenance Engineering.*
3. *To learn about Wear and Corrosion and their prevention.*
4. *To know about Fault Tracking*
5. *To learn about Periodic and preventive maintenance.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Understand the points of factories act 1948 for health and safety.*
2. *Understand the cost & its relation with replacement economy.*
3. *Understand the concepts of Wear and Corrosion Prevention*
4. *Understand the concepts of sequence of fault finding activities*
5. *Understand the Program and schedule of preventive maintenance of mechanical and electrical equipment.*
6. *Understand the Periodic Maintenance of Equipments*

**UNIT-I**

**Industrial Safety:** Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and fire fighting, equipment and methods.

**UNIT-II**

**Fundamentals of Maintenance Engineering:** Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

**UNIT-III**

**Wear and Corrosion and their Prevention:** Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working

and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

#### UNIT-IV

**Fault Tracing:** Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

#### UNIT-V

**Periodic and Preventive Maintenance:** Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.

#### TEXT BOOKS

1. Higgins & Morrow, *Maintenance Engineering Handbook*, Da Information Services.
2. H. P. Garg, *Maintenance Engineering*, S. Chand and Company.

#### REFERENCE BOOKS

1. Audels, *Pump-hydraulic Compressors*, Mcgrew Hill Publication.
2. Winterkorn, *Foundation Engineering Handbook*, Chapman & Hall London.

**II M.Tech - I Sem.**

**L    T    P    C**

**3    -    -    3**

**(20ME3027) ADVANCES IN OPERATIONS RESEARCH  
(Open Elective)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *Enumerate the fundamentals of Linear Programming*
2. *Learn classical optimization techniques*
3. *Develop the best strategy of Game and identifying the Queuing theory.*
4. *Understand about sequence and optimum Duration of the Project*
5. *Develop the importance of Replacement models and Inventory control*

**COURSE OUTCOMES (COs)**

On successful Completion of this course the student will be able to

1. *Create mathematical models of the real time situations.*
2. *Implement Transportation and Assignment problems to solve in real time industry*
3. *choose the best strategy of Game and capable of identifying the suitable queuing Theory.*
4. *Enumerate fundamental techniques and apply it to solve various optimization Areas.*
5. *Investigate, study, Apply knowledge in Replacement models and understand the Inventory control Models*

**UNIT-I**

**Introduction to OR and Linear Programming**–OR definition–Types of Operations Research models; Linear Programming- Problem Formulation, Graphical Method, Simplex Method, Big-M Method, Degeneracy - Problems

**UNIT-II**

**Transportation Problem** – Formulation; Initial Basic Feasible Solution-North-West Corner Rule, Least Cost Method, Vogel's Approximation Method, Modified Distribution (MODI) Method, Unbalanced Transportation - Problems

**Assignment Problem** – Formulation, Optimal Solution -Traveling Salesman problem.

**UNIT-III**

**Game Theory** - Introduction – Minimax (Maxi mini) Criterion and Optimal Strategy, Saddle Point, Solution of Games with Pure Strategy and Mixed Strategies – 2 X 2 Games – Dominance Principle.

**Queuing Theory**- Introduction to queuing system–Service Channel, Arrival Pattern, Size of Population, Service Pattern, Queue Discipline, Customer Behavior, Probability Distribution-Birth & Death Process, Simple Problems on Single Service channel only.

**UNIT-IV**

**Sequencing** –Terminology - Johnson's Algorithm for n-jobs x 2 Machines and n-jobs x 3 machines models - Problems

**PERT & CPM:** Introduction, Difference between PERT and CPM, Terminology-Activities, Events, Predecessor, Early Start, Early Finish, Late Start & Late Finish Times, Earliest Occurrence and Latest Occurrence of the Event, Total Float, Free Float, Independent Float; CPM- Deterministic Model; PERT- Probabilistic Model, Critical Path, Optimal Project Duration, Least Possible Project Duration- Problems.

**UNIT-V**

**Replacement** – Failure Mechanism of Items, Types of Replacements- Individual Replacement policy, Group Replacement policy, Replacement of items fail suddenly – problems

**Inventory** - Necessity for maintaining inventory, inventory costs, classification of fixed order quantity inventory models, selective inventory management techniques.

**TEXT BOOKS**

**(20ME3028) COMPOSITE MATERIALS  
(Open Elective)**

**COURSE OBJECTIVES**

The objectives of this course:

1. *To understand the mechanical behavior of composite materials*
2. *To get an overview of the methods of manufacturing composite materials.*
3. *To know the fundamentals of composite materials.*
4. *To understand the fabrication and process of composites.*
5. *To recognize the applications of composite materials.*

**COURSE OUTCOMES (COs)**

On successful completion of this course, the student will be able to

1. *Understand fundamental concept of composite materials.*
2. *Analyse different types of composite materials.*
3. *Fabricate and process composite materials.*
4. *MMC & CMC*
5. *Understand Mechanical behavior of composite materials.*
6. *Application of composite materials .*

**UNIT-I**

**Introduction To Composites:** Fundamentals of composites – need– enhancement of properties – classifications —Introduction to Reinforcement composites–types. Applications.Fiber production techniques for glass, carbon and ceramic fibers –Resin materials-Types.

**UNIT-II**

**Polymer Matrix Composites:** Fabrication of PMC's ,Fabrication of Fibers, Plastic Fiber Forms, Pre-pregs, Molding Compounds-Processes, Lay-Ups, Filament Winding, Pultrusion, and Recycling. Matrix – Reinforcement Interface, Wettability.

**UNIT-III**

**MMC & CMC :**Fabrication of MMC'S, Liquid Infiltration- Casting, Solid State Processes-Diffusion Bonding &In Situ Technique. Fabrication of CMC's, Hot-Pressing, Infiltration, In Situ Chemical reaction Techniques. CVD & CVI, Sol-gel.

**UNIT-IV**

**Mechanics of Composites:** Basic assumptions of laminated anisotropic plates, symmetric laminates, angle ply laminates, cross ply laminates, laminate structural moduli, evaluation of lamina properties, determination of lamina stresses, maximum stress and strain criteria, Von-Mises Yield criterion for isotropic materials, generalized Hill's criterion for anisotropic

materials, Tsai-Hill's criterion for composites, prediction of laminate failure, thermal analysis of composite laminates

#### UNIT-V

**Applications Of Composites:** Applications of advanced composite materials. Environmental effects in Composites, Green composites, Synthesis and Properties of Nano composites. Surface Composites & Surface metal matrix composites: Need, Synthesis, Properties and applications.
